Usage

The dNTP-sets and -mixes are ready-to-use for DNA-polymerisation reactions, all DNA labelling-and sequencing reactions. Tested for PCR reactions of up to 10 kbp DNA fragments length.

Caution

dNTPs are stable at -20°C in a constant-temperature freezer. Avoid multiple thawing/freezing. For long term usage we recommend to aliquot nucleotides. dNTP-powder is more stable. Nevertheless frequent temperature changes should also be avoided.
